

Task 4: Compare average hourly rates across different countries

- Objective: To compare and analyze the average hourly rates offered across different geographical locations.
- Deliverables: An interactive map or chart showing hourly rates by country.

Average Hourly Rates by Country

Analysis of the Map:

- **Color Gradient Representation:**

- The map uses a color gradient to represent average hourly rates across different countries, ranging from light purple (lower rates) to dark purple and into warmer colors like orange and yellow for higher rates.
- This gradient provides a visual indication of how average hourly rates vary geographically.

- **Highlighted Regions:**

- The United States and Canada are highlighted with a very dark color, suggesting they have some of the highest average hourly rates, likely around \$35 per hour as indicated by the color scale.
- Other countries, such as those in Europe (e.g., Italy, colored in pink), appear to have moderately high rates, potentially in the \$15-\$25 range.
- Some Asian regions are also visible with varying colors, indicating a range of average hourly rates.
